Description of Property and Justification: *(Please attach map and photo)*

Building 5038 is a fenced substation initially installed in 1941. The fenced area measures 90 x 62 feet and has a concrete slab in the middle surrounded by pumice gravel. The area has a section of bolted metal framing that once supported the electrical equipment. Currently all electrical equipment is in modern self-contained, transportable transformer units.

A one-story brick maintenance building that measures 13 x 10 feet occupies the northwest corner of the fenced area. The exterior walls are running bond brick. The roof is a flat concrete slab. The east elevation contains paired wood-paneled doors with two lights. The west elevation contains two, vinyl-clad, three-light, windows with concrete sills.

This electrical utility area has been modified since its installation. Additions to the area occurred in 1958 and 1964 and the power capacity was modified in 1974.

Building 5038 is a utility area that does not possess the qualities of significance for individual listing for the National Register of Historic Places for individual historic association (Criterion A), for association with significant persons (Criterion B), or as an example of significant architecture (Criterion C.) The utility area is not part of historic district.
